

# ***Galley® Line***

## **NSF Standard 7 Salad Bars 33°F to 40°F**

***We have created a dual temperature cold pan where the top is colder than the bottom. This was done to try to avoid the problem of lettuce greens freezing at the bottom.***

The insulated cold well is 10" deep. Within this cold well, there is a three (3) inch blanket of cold air above the pans. This blanket is intended to keep out the hot air in the room. Because of this cold blanket, the pans have been set on a ledge three inches below the top surface. When you look at the cold pan, you see the salads surrounded by a very pretty white three inch frost wall. On the bottom walls, under the pans, there is no frost.
