

Galley makes your good food look even better. And Galley saves you time, space, labor—and importantly these days—energy.

The Food Service Industry Is Changing!

Your customers are placing new and growing demands on your food service operation. Customers want a wide assortment of foods, they want food fast, they want a decorative atmosphere...and they want variety.

Galley gives you the flexibility needed to meet the tough, ever-changing challenge of pleasing customers.

With Galley, you can change menus quickly, add items easily. The unique versatility of the system permits you to change from “fast food to prime rib,” quickly and simply, with a minimum of interruption. When your customers begin demanding something new and fresh, the ingenuity of the Galley serving system helps supply the imagination!

The System

Serve a fast food lunch or an elegant gourmet dinner with essentially the same Galley system. Galley is the ultimate in food service flexibility.

The beauty of it all lies in the way Galley modules arrange and lock together.

One person can set up a permanent-looking serving line in a matter of minutes. Casters are hidden—very unusual—and modules simply “snap” together by means of Galley’s patented “Matelock” system. There are no exposed and unsightly latches to snag a customer’s clothing. And the “Matelock” system self-aligns and locks the service line... giving the line a smooth, flowing design.

Apply the brakes and the Galley line looks like a permanent fixture. You say you have sixty convectioners using the same room in an hour? Simply remove the Galley system, or design a totally new configuration on a moments notice.

Spice Up Your Line. And Save Space, Too.

Galley’s “Matelock” system allows you to design a line to work with—and not against—architectural limitations. Pattern possibilities are almost limitless. Make 90° turns with corner unit modules...or design islands, “U’s,” sawtooth or scramble patterns, and more. It all adds up to speed, efficiency, smoother workflow, and profit.

Food Service Has Never Looked So Good!

Galley dares to break through the sterile look of traditional stainless steel boxes on large unsightly casters. Galley style is unique...exciting...for one reason: to better merchandise food. Galley’s “looks” bring a new dimension to food presentation.

But the Galley system is as functional as it is beautiful. There are no sharp edges to snag clothes. There are no hidden nooks or crannies, so careability and cleanability are easy and unmatched.

Modules bodies are made of tough, flame retardant ABS formed plastic, (Same material your telephone is made from). Unlike modules made of stainless steel, fiberglass or wood, Galley modules are virtually dent and "ding" proof.

Color is neutral, "pewter tan" to fit into any decor. Add rich walnut or teak woodgrain, decorator panels of your choice—or custom coordinate tablecloths, draperies, walls or carpeting. When holidays come, simply change panels to fit the occasion!

**Modules For Any Need.
Modules For The Future.**

Each module in the Galley system functions independently, with separate heating, refrigeration and lighting controls.

All controls are hidden from customer view. Controls are tamper-resistant and won't snag clothes.

When storage is needed for lids, food and baskets, there is plenty of it. Stainless steel push handles provide for sure, steady portability. Push with handles to lock modules together. To unlock modules, simply grasp handles firmly and pull the modules to one side.

Modules are fully accessorized with breath guards, trayslides, canopies, everything you will need...and more. Galley modules are NSF and UL listed.

For Your Future in Food Service.
